

IILM UNIVERSITY

Greater Noida, U.P.

Software Engineering

Internship Presentation

Student Name: Shilpy Kumari

Enrollment Number: cs-2341193

Program & Semester: B.Tech CSE, 7th Semester (Batch 2026-27)

Organization: Trufinixx

About Trufinixx

Trufinixx is a technology solutions company built by a team of IITians and senior professionals with hands-on experience building and delivering real-world technology solutions.

Their approach: understand the problem deeply, execute with rigor, and ship systems that perform reliably.

Internship Duration: 15th June 2020 – 15th July 2026

Role: Software Engineering Intern

Introduction & Problem Statement

Organizations require robust and scalable internal tools to manage operations efficiently, yet existing processes frequently suffer from manual tracking and disconnected workflows.

This project focused on designing, developing, and deploying a modern web application module to streamline resource management, reduce process latency, and enhance system usability.

Project Objectives

- Understand and document requirements for an enterprise-level web platform
- Design an intuitive, responsive user interface ensuring high usability
- Develop frontend components using HTML5, CSS3, and JavaScript
- Explore and implement backend logic for secure data handling
- Integrate modules and perform rigorous testing for deployment readiness

Technologies & Tools Used

Frontend Technologies

HTML5, CSS3, JavaScript
(ES6+)

Database & Storage

Relational Database / SQL

Development Tools

VS Code, Chrome DevTools

Core Concepts

HCI Models, Responsive UI

Version Control

Git & GitHub

System Architecture

Methodology

- Agile software development with iterative two-week sprint cycles
- Requirement analysis and UI wireframing
- Frontend interface development and responsive styling
- Backend API integration and workflow logic testing
- Daily stand-up meetings and mentor feedback sessions
- Final testing, bug fixing, and project documentation

Expected Outcomes

A fully functional, responsive, and secure web application module deployed in a testing environment — streamlining operational tracking, reducing manual inefficiencies, and providing an intuitive user experience built on an extensible, modular architecture.

Thank You
