

A REPORT ON
SOFTWARE ENGINEERING INTERNSHIP
AT TRUFINIXX

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.
In partial fulfilment of the requirement of degree of
B.Tech CSE

By
Roll Number : CS-2341193
Name of Student: SHILPY KUMARI
Batch: 2023-27

CANDIDATE'S DECLARATION

I, **SHILPY KUMAR** do hereby declare that the internship report titled “**Software Engineering Internship at Trufinixx**” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Student Name: SHILPY KUMARI
Roll No: CS-2341193

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

CERTIFICATE

THIS IS TO CERTIFY THAT

SHILPY KUMARI

has successfully completed the Internship Program at TruFinixx
from 15th June 2026 to 15th July 2026.

During this internship, he demonstrated dedication, enthusiasm,
and a strong commitment to learning.

We wish him all the best for his future endeavors.

Ajay Kumar

PROJECT DESCRIPTION

Introduction

This report details the work completed during the Software Engineering Internship at **Trufinixx** from **15th June 2020 to 15th July 2026**. The internship offered hands-on experience in full-stack web component design, RESTful backend service integration, system performance optimization, and industrial software engineering workflows.

Organization Profile

Trufinixx (Established in 2020) is a software engineering and technology solutions provider functioning under the core framework motto "*Innovate, Inspire, Impact*". The firm is dedicated to empowering technical talent, building modern enterprise solutions, and driving dynamic digital transformations across web and cloud infrastructure platforms.

Problem Statement

Existing legacy web application components within the enterprise infrastructure suffered from high latency, rigid user interface structures, and inefficient data synchronization protocols. The target objective was to overhaul these sub-systems into modern, asynchronous web modules capable of processing concurrent user requests with minimal overhead.

Project Objectives

The primary objectives defined during the internship tenure included:

- Developing modular, scalable dynamic front-end components using modern JavaScript frameworks.
- Designing robust backend API endpoints to facilitate secure and low-latency client-server communication.
- Optimizing existing database query structures and conducting thorough unit testing.

Scope of the Project

The project scope encompasses full-stack dynamic module development, responsive user experience architecture, automated database query routing, and deployment through CI/CD development pipelines.

Technologies and Tools Used

The technology stack utilized during the internship project comprised:

- **Programming Languages:** JavaScript (ES6+), Python, HTML5, CSS3
- **Frameworks & Libraries:** React.js, Node.js, Express.js
- **Database Systems:** MongoDB, MySQL
- **Tools & Utilities:** Git, GitHub, Postman, VS Code

System Architecture

The application follows a standard three-tier architecture design:

- **Presentation Layer:** React-driven responsive front-end delivering client interaction components.
- **Application Layer:** Express.js application server executing core business domain logic and request handling.
- **Data Layer:** Persistent relational/non-relational database handling structured record storage.

Methodology

The development lifecycle adopted an **Agile/Scrum** framework. The process incorporated weekly sprint planning, daily stand-up meetings, continuous integration routines, and structured peer code reviews to maintain high quality standards.

Expected Outcomes

- A fully responsive, scalable web interface component with significantly reduced load latencies.
- Secure RESTful API integration for smooth real-time data handling.
- Standardized developer documentation ensuring future modular extension.
